

— CARBON INTELLIGENCE

GreenRoute

South Africa's First Carbon Intelligence Platform

Track, compare, and reduce your commute's CO₂ — built for Cape Town

April 2026

THE PROBLEM

900

gCO₂ per kilowatt-hour

South Africa's electricity grid — among
the most carbon-intensive in the world

Source: Eskom Integrated Report 2025

No platform exists for South African commuters

The minibus taxi sector is invisible to global tools

60–70% of SA urban commuters travel by kombi — no tracker
accounts for it

Foreign emission factors don't fit South Africa

UK and US datasets miss local load factors, fuel quality, and
road conditions

Corporates face mounting Scope 3 obligations

JSE ESG requirements demand commuter data that companies
can't currently collect

— THE SOLUTION

One app. Every mode. Real South African data.

01

Track

Log any trip across 9 transport modes — or let auto-detect do it for you passively

02

Compare

See real grams of CO₂ for every route choice, calibrated to SA-specific emission factors

03

Act

Choose a greener route, hit your weekly budget, and build carbon-saving streaks

From commute to carbon score in seconds

1

Auto-Detect

GPS and accelerometer signals detect your trip and infer the transport mode — no input needed

2

Calculate

Localised SA emission factors
compute your exact CO₂ — updated live via the Eskom grid

3

Report

Weekly budget, monthly summaries, streak rewards, and enterprise Scope

MODE INFERENCE

Avg speed < 6 km/h → **Walk**

Regular stops, 15–50 km/h → **MyCiTi**

High variance, 15–60 km/h → **Taxi**

Smooth accel, 20+ km/h → **EV / Car**

9 SA modes. Localised data. Honest numbers.

KEY FEATURES

Built for commuters. Ready for enterprise.

AUTO-DETECT

Passive trip logging

GPS and accelerometer detect trips and infer your transport mode without any user input

LIVE GRID SYNC

Dynamic EV factors

Eskom grid intensity updates EV emission factors in real time via the Electricity Maps API

ROUTE LEARNING

Smarter with every trip

Recognises your top commutes after 3 trips and surfaces them as one-tap shortcuts

ESG REPORTING

Scope 3 ready

Aggregated commuter emission data for GRI 305-3 and JSE ESG disclosure requirements

Two audiences. One platform. Growing urgency.

9

Transport modes tracked

Including the minibus taxi — the backbone of SA urban mobility, invisible to all existing tools

Individual commuters

Growing urban climate awareness and carbon literacy drive adoption in Cape Town's commuter base

3x

Eskom's grid vs EU average

SA's carbon intensity makes every mode choice more impactful than anywhere in Europe

Enterprise sustainability teams

JSE ESG disclosures and global Scope 3 reporting mandates create an urgent, unmet B2B demand

— JOIN THE BETA

Every trip is a choice. Make it count.

GreenRoute is live in Cape Town — beta access open now for commuters and enterprise teams.
